How To Order

- For standard models listed in this catalog, use the **Ordering code** column and quantities that you need.
- For non-standard models, reference the ordering requirements matrix at the end of each section to build a catalog number. Give this catalog number to customer service.

Why Cooper Crouse-Hinds?

- The broadest line of harsh and hazardous signaling, alarm and communication products available in both IEC and NEC designs and certifications.
- A new line of hazardous area call points (fire alarm or emergency notification devices) provides you a unique product offering unequalled by any other manufacturer of hazardous location signaling products.
- Worldwide listings with UL, cUL, ATEX, GOST, CSA and CQST (Chinese) approvals provide customer solutions that the competition can't match.
- Superior enclosure materials providing unmatched ingress protection and corrosion resistance from the harshest conditions.
- A unique signaling product offering integral visual and audible signaling capability pre-wired for simultaneous output activation.
- A new line of heat detectors for early indication of potential processing problems.

A Guide To The Use Of Electrical Equipment In Potentially Explosive Atmospheres

Introduction

Potentially explosive atmospheres exist where there is a risk of explosion due to mixtures of gas/air, vapor/air, dust/air or other flammable combinations. In such areas there is a necessity to eliminate sources of ignition such as sparks, hot surfaces or static electricity which may ignite these mixtures. Where electrical equipment has to be used in these areas it must be so designed and constructed as to not create sources of ignition capable of igniting these mixtures. Before electrical equipment can be used in a potentially explosive atmosphere, a representative sample has to be fully tested and certified by an independent authority such as Baseefa 2001 in Europe or UL in the U.S.A.

This information is intended as a guide only and further expert guidance should be sought before placing into service, maintaining or repairing any item of equipment in a potentially explosive atmosphere.

Where comparisons are shown between, for example, European and North American practice this may be an approximation and individual standards/codes of practice should be consulted for precise details.

Area Classification

Plants are divided into Zones (European and IEC method) or Divisions (North American method) according to the likelihood of a potentially explosive atmosphere being present.

Note: North American legislation now allows Zones to be used to classify areas, where this practice is used it follows the IEC Zone method.

European & IEC Classification	Definition of zone or division	North American Classification
Zone 0 (gases) Zone 20 (dusts)	An area in which an explosive mixture is continuously present or present for long periods	Class I, Division 1 (gases) Class II, Division 1 (dusts)
Zone 1 (gases) Zone 21 (dusts)	An area in which an explosive mixture is likely to occur in normal operation	Class I, Division 1 (gases) Class II, Division 1 (dusts)
Zone 2 (gases) Zone 22 (dusts)	An area in which an explosive mixture is not likely to occur in normal operation and if it occurs it will exist only for a short time	Class I, Division 2 (gases) Class II, Division 2 (dusts) Class III, Division 1 (fibers) Class III, Division 2 (fibers)

Gas Groups (plus dusts and fibers)

There are two main gas groups, Group I—Mining only and Group II—Surface Industries. These categories are used in European and I.E.C. groupings.

Group I is concerned only with underground mining where methane and coal dust are present.

Group II gases occurring in surface industries, are sub-grouped according to their volatility. This enables electrical equipment to be designed to less onerous tolerances if it is to be used with the least volatile gases.

Typical gas/material	European/I.E.C. Gas Group	North American Gas Group
Methane	I	-
Acetylene	IIC	A
Hydrogen	IIC	B
Ethylene	IIB	C
Propane	IIA	D
Metal dust	-	E
Coal dust	-	F
Grain dust	-	G

Temperature

Hot surfaces can ignite explosive atmospheres. To guard against this, all electrical equipment intended for use in a potentially explosive atmosphere is classified according to the maximum surface temperature it will reach in service. This temperature is normally based on a surrounding ambient temperature of 40 degrees Centigrade (102 degrees Fahrenheit). This temperature can then be compared to the ignition temperature of the gas(es) which may come into contact with the equipment and a judgement reached as to the suitability of the equipment to be used in that area.

Temperature Classification		Maximum Surface Temperature
European/I.E.C.	North American	
T1	T1	450° C
T2	T2 T2A T2B T2C T2D	300° C 280° C 260° C 230° C 215° C
T3	T3 T3A T3B T3C	200° C 180° C 165° C 160° C
T4	T4 T4A	135° C 120° C
T5	T5	100° C
T6	T6	85° C

e.g. Butane has an ignition temperature of 365 degrees Centigrade, equipment used in the vicinity of this gas would need a T rating of T2 or better.

Types of Electrical Equipment Suitable for use in Potentially Explosive Atmospheres

Different techniques are used to prevent electrical equipment from igniting explosive atmospheres. There are restrictions on where these different types of equipment can be used as follows:	European Area of use Designation Standard	IEC Area of use Designation Standard	NEC Area of use Designation Standard
Flameproof Enclosure —An enclosure used to house electrical equipment, which when subjected to an internal explosion will not ignite a surrounding explosive atmosphere.	Zones 1 & 2 EExd EN60079-1	Zones 1 & 2 Exd IEC60079-1	Class I Divisions 1 & 2 — UL1203
Intrinsic Safety —A technique whereby electrical energy is limited such that any sparks or heat generated by electrical equipment is sufficiently low as to not ignite an explosive atmosphere.	Zones 0, 1 & 2 EExi EN50020	Zones 1 & 2 Exi IEC60079-11	Class I Divisions 1 & 2 — UL913
Increased Safety —This equipment is so designed as to eliminate sparks and hot surfaces capable of igniting an explosive atmosphere.	Zones 1 & 2 EExe EN60079-7	Zones 1 & 2 Exi IEC60079-7	— — —
Purged and Pressurized —Electrical equipment is housed in an enclosure which is initially purged to remove any explosive mixture, then pressurised to prevent ingress of the surrounding atmosphere prior to energization.	Zones 1 & 2 EExp EN50016	Zones 1 & 2 Exp IEC60079-2	Class I Divisions 1 & 2 — NFPA496
Encapsulation —A method of exclusion of the explosive atmosphere by fully encapsulating the electrical components in an approved material.	Zones 1 & 2 EExm EN60079-18	Zones 1 & 2 Exm IEC60079-18	— — —
Oil Immersion —The electrical components are immersed in oil, thus excluding the explosive atmosphere from any sparks or hot surfaces.	Zones 1 & 2 EExo EN50015	Zones 1 & 2 Exo IEC60079-6	Class I Division 2 — UL698
Powder Filling —Equipment is surrounded with a fine powder, such as quartz, which does not allow the surrounding atmosphere to come into contact with any sparks or hot surfaces.	Zones 1 & 2 EExq EN50017	Zones 1 & 2 Exq IEC60079-5	— — —
Non-sparking —Sparking contacts are sealed against ingress of the surrounding atmosphere, hot surfaces are eliminated.	Zone 2 EExn EN60079-15	Zone 2 Exn IEC60079-15	— — —

Selection, installation and maintenance of electrical equipment intended for use in potentially explosive atmospheres.

International and national standard requirements for the safe use of electrical equipment in potentially explosive atmospheres as follows:

	International	Europe	U.S.A.
General Recommendations	IEC60079-14	EN60079-14	N.E.C. Chapter 5
Classification of Hazardous Areas	IEC60079-10	EN60079-10	N.E.C. Chapter 5
Inspection and Maintenance of Electrical Equipment	IEC60079-17	EN60079-17	–
Requirements for Flameproof Enclosures	IEC60079-14	EN60079-14	N.E.C. Chapter 5
Requirements for Intrinsically Safe Equipment	IEC60079-14	EN60079-14	N.E.C. Chapter 5
Requirements for Increased Safety Equipment	IEC60079-14	EN60079-14	N.E.C. Chapter 5
Requirements for Purged and Pressurized Equipment	IEC60079-14	EN60079-14	N.E.C. Chapter 5
Requirements for Non-Sparking Equipment	IEC60079-14	EN60079-14	–

Cooper Crouse-Hinds advises that all Explosionproof electrical equipment is maintained, by suitably trained personnel, in accordance with the Manufacturers' recommendations.

Any spare parts used should be purchased from the original Manufacturer and repairs should be carried out by the Manufacturer or under his supervision, in order that the item remains in conformance with the certification documents.

The Certification Process

All electrical equipment, intended for use in a potentially explosive atmosphere, should be certified as suitable for such use.

The methods of obtaining certification differ in detail, see below, between each certifying body or group of bodies (e.g. CENELEC). Basically this process consists of supplying a representative sample of the equipment along with a set of drawings to a recognised test/certification body e.g. Baseefa 2001 who in turn test the equipment against a recognised Standard e.g. EN60079-14 and issues a Certificate. The user of the equipment can then refer to this Certificate to enable him to safely put the item into service in a zone appropriate to the Certification.

European Practice

ALL EQUIPMENT, BOTH ELECTRICAL AND MECHANICAL, INTENDED TO BE PUT INTO SERVICE WITHIN THE EEC HAS TO BE CERTIFIED IN ACCORDANCE WITH THE ATEX DIRECTIVE.

It should be noted also that **MECHANICAL** equipment is covered by the ATEX Directive so for the first time items such as gearboxes will have to carry ATEX certification.

The equipment coding signifying compliance with ATEX is as follows:

II2G i.e.

– Explosionproof in accordance with ATEX.

II – Group II surface industries.

2 – category 2 equipment (suitable for use in Zone 1) note: Category 1 is suitable for Zone 0.
Category 3 is suitable for Zone 2.

G – suitable for atmospheres containing gas (D is suitable for atmospheres containing dusts).

Equipment will be CE marked when certified to ATEX.

North American Practice

Sample equipment and supporting documentation are submitted to the appropriate authority e.g. U.L., F.M., C.S.A.

The equipment is tested in accordance with relevant standards for explosion protection and also for general electrical requirements e.g. light fittings.

After successful testing, a listing is issued allowing the manufacturer to place the product on the market.

The product is marked with the certification details such as the gas groups A,B,C,D and the area of use e.g. Class I, Division 1.

Applicable UL, cUL, ULC, CSA Certifications

UL1638 Visual Signaling Appliances—Private-mode emergency and general utility signaling.

ULC S526-02—Visual signal devices for fire alarm systems.

UL1971—Listed for signaling devices for the hearing impaired.

ULC S526-02—Visual signal devices for fire alarm systems

UL38—Manual signaling boxes for fire alarm systems.

Similar to CAN/ULC S58-M91—Standard for manual pull stations for fire alarm systems

UL464—Audible signal appliances.

ULC S525-99—Audible signal devices for fire alarm systems

UL11604—Electric equipment for use in Class II, Division 2, and Class III, hazardous locations.

UL844—Electric lighting fixtures for use in hazardous locations.

CSA C22.2 No. 137-M1981—Electric Luminaires for use in hazardous locations

UL1203—Explosionproof and dust ignitionproof electrical equipment for use in hazardous locations.

CSA C22.2 No. 30-M1986—Explosionproof enclosures for use in Class I Locations.

CSA C22.2 No. 25-1966—Explosionproof enclosures for use in Class II Groups E, F and G hazardous locations.

UL1598A—Supplemental requirements for luminaires for installation on marine vessels.

Refer to Transport Canada Technical Publication TP127E-Ships Electrical Standards.

Worldwide Certification

Most countries outside Europe or North America use the IEC Standards as a basis for their own national standards.

The Russian Federation certifies equipment to GOST 'R' standards, these closely follow CENELEC practice.

In Russia, certain products used in fire alarm systems may be required to carry the Russian fire approval (VNIPO). Note that not all Cooper Crouse-Hinds products that have been certified to GOST 'R' are VNIPO approved. Check specification on technical data sheets before ordering.

Kazakhstan has a certification process (GOST 'K') where approval is normally based on compliance with CENELEC standards.

Certification in China is based on compliance with international standards such as CENELEC or UL, or their own CQST standard.

There is a scheme in place which will, when fully adopted, allow for internationally recognized certification to become a reality, this is the IEC EX SCHEME. This uses the IEC standards and IEC recognised test and certification bodies to issue mutually recognised test reports and certificates. The scheme is in its infancy and its level of success cannot yet be measured.

Ingress Protection

2 digits are used to denote the level of ingress protection that a piece of apparatus enjoys:

IP <div style="display: inline-block; width: 20px; height: 20px; border: 1px solid black; vertical-align: middle;"></div> <div style="display: inline-block; width: 20px; height: 20px; border: 1px solid black; vertical-align: middle;"></div>			
	Solids		Liquids
0	No protection.	0	No protection.
1	Protected against solid objects up to 50mm, e.g. hands.	1	Protected against vertically falling drops of water.
2	Protected against solid objects up to 12mm, e.g. fingers.	2	Protected against water spray up to 15 degrees from vertical.
3	Protected against solid objects up to 2.5mm, e.g. tools.	3	Protected against water spray up to 60 degrees from vertical.
4	Protected against solid objects over 1mm, e.g. wires.	4	Protected against water sprays from all directions.
5	Protected against dusts. (No harmful deposits).	5	Protected against water jets from all directions.
6	Totally protected against dust.	6	Protected against strong water jets from all directions, e.g. Offshore.
		7	Protected against immersion between 15cm and 1m in depth.
		8	Protected against long immersion under pressure.

NEMA Standards

North American practice is to use NEMA standards to describe ingress protection, i.e.:

NEMA 3	is similar to	IP 54
NEMA 4	is similar to	IP 55
NEMA 4X	is similar to	IP 56
NEMA 6	is similar to	IP 67

These manual fire alarm call points have been designed for use in hazardous locations and harsh environmental conditions. They offer:

- The broadest range of hazardous location manual fire alarm activation devices in the industry.
- The compact design, activation choices such as pushbutton or breakglass, housing color choices and comprehensive worldwide certifications make this product family a project closer.
- Flexibility as all units accept metric cable or NPT conduit entries, and each unit can be custom designed for a specific fire alarm or emergency activation requirements.

Primary Applications

- Fire alarm activation
- Emergency evacuation
- Process shut-down

Industries

- Liquid natural gas terminals
- Energy exploration
- Chemical
- Refinery
- Power generation

Key Features & Benefits

- In-line and end-of-line resistors fitted for use in fire activation circuits
- Optional LED to indicate operation
- Plastic break glass element available—easy activation yet safe to touch
- Corrosion resistant GRP—ideal for Marine applications
- Retained stainless steel cover screws—won't corrode and never lose screws
- Optional lift flap for protection

MEDC Series Fire Alarm or Emergency Call Points—Hazardous Locations, Weatherproof, Marine

Both the EExialICT4 units and the EExdIIC6 units have the same external appearance. Also the internal components are identical throughout the range. Each unit can be wired for either NO, NC or CO contacts to customer specification.

Breakglass unit, latching	Type SM87BGL
Lift flap, Breakglass, latching	Type SM87LBGL
Voltage:	EExd 24V AC/DC EExia 28V.
Rating:	2 amp.
Switches:	2 pole c/o, wired to terminals. Optional up to 4 pole.
Terminals:	Will accept up to 2.5mm ² cable.
Entries:	Up to 4 x 20mm or 25mm ISO EExd/EExia.
Optional Indicator:	A red high intensity LED can be fitted for alarm indication.
Material:	Grade 316 ANC4B Stainless Steel or LM 25 TF Marine Grade Alloy.
Weight:	3.8 kg. steel (approx.) or 2.5 kg. alloy (approx.).
Finish:	Epoxy paint finish as standard or to customer's specification.
Certification:	CENELEC EN 50014, EN50018 (for Exd) and EN50020 (for Exi). EExialIIC T4 Cert No. Baseefa 02 ATEX 0152X. EExdIIC T5/T6 Cert No. Baseefa 03 ATEX 0075. CSA Certification: Class I Groups A-D I.S. version (SM87 PBI only). Class I, Div 1 & 2, Group D (Exd – SM87 PB & SM87 BG). GOST 'R' Certification: 1Exib IIC T4, 1Exd IIC T4* GOST 'K' Certification: Exib IIC T4.* Chinese Certification: CQST – Exia IIC T4, Exd IIC T5/T6.* *Available upon request

SM87 SL

XB12 SL

Note: Units shown are for representation only. Other variations are available.

The most rugged and reliable status lights for harsh and hazardous applications.

Available as Xenon, incandescent and fluorescent beacons/strobes.

The SM87 SL range is manufactured in marine grade alloy and the XB12 SL in corrosion-free GRP to provide a wide range of status lights to suit your requirements.

All units can be supplied as 1, 2, 3, 4 or 5 stacks.

Primary Applications

- Process status
- Messaging
- Alert or emergency condition indication

Industries

- Offshore & onshore
- Energy exploration & transmission
- Refining
- Chemical & petrochemical
- Pharmaceutical

Cooper Crouse-Hinds and MEDC provides a complete line of Strobe Lights and rotating beacons for harsh and hazardous visual indications.

- Products that meet world-wide standards such as UL, cUL, CSA, ATEX and GOST, and all Class, Division & Zone area classifications
- Products designed for both conduit wiring and/or cable connection, NPT or metric
- Complete line of strobe light output intensities, strobe light colors and operating voltages
- Units designed for use in fire alarm circuits meeting National Fire Protection Agency requirements for visual signaling for the hearing impaired

What Types of Signals are Available?

1. *Strobe Lights* — Used for signaling or warning of various conditions. Emits a powerful blast of bright light.
2. *Rotating Beacons* — Used to signal over a large area when the light must be seen from a long distance.
3. *Steady-on Beacons* — Typically used as a continuous source to warn, communicate or draw attention to an area, machine or process.

4. *Stack Lights* — Used for multiple indication in one signaling device. Compact and versatile, the three-color (red, amber and green) is most popular.

Lens Color and Their Applications

Most Cooper Crouse-Hinds strobes, steady and flashing beacons come in six lens colors: amber, blue, clear, green, magenta and red. Cooper Crouse-Hinds LED signals come in amber, blue, green, red and, in some cases, white. The following are examples of how various lens colors are used in industrial and commercial signaling environments:

Amber — Denotes caution.

Blue — Used for safety and security.

Clear (or White) & Green — Used to indicate normal run operation.

Clear for Fire Alarm Applications — Used to indicate a fire emergency.

Magenta — Used for radiation alarms.

Red — Denotes emergency or warning.

These listed strobes have been designed for use in potentially explosive atmospheres and harsh environmental conditions. The enclosures are suitable for use offshore or onshore, where a lightweight product combined with corrosion resistance is required.

The housing is manufactured from a U.V. stable, glass reinforced polyester, with the lens manufactured from a U.V. stable polycarbonate. Stainless steel screws are used ensuring a totally corrosion-free product.

The strobes contain supervisory diode and four wire leads for fire alarm applications. This strobe is also available UL 1971 (ADA) Listed for hearing impaired applications.

Units can be painted to customer specification and supplied with identification labels.

Primary Applications

- Condition signaling
- Security alert
- Equipment obstruction warning
- Emergency evacuation signaling

Typical Industries

- Utility gas plants
- Wastewater treatment plants
- Mining
- Petroleum refineries
- Chemical & petrochemical
- Pulp & paper

Certifications & Compliances

- UL Listed for USA and Canada
 - Hazardous locations for USA and Canada Class I, Div. 2, Groups A, B, C & D*
UL 1971 compliant version available¹
 - Ordinary locations: Visual Signal Device
- NEMA 4X and 6, IP66 & 67
- Certified temperature -67°F to +158°F
-55°C to +70°C

Key Features & Benefits

- Pipe mount with ½" NPT entry
- Corrosion resistant GRP enclosure
- XB16 580,000 peak candlepower
XB15 520,000 peak candlepower
- Polycarbonate lens, various colors available¹
- 4 wire diode monitored board
- Optional relay initiate
- Optional lens guard

*Conforms to UL regulated voltage

Specification—XB15 Unit

Certification: UL Listed for USA and Canada:

– Hazardous locations

Class I, Div 2, groups A, B, C & D

Class I, Zone 1, AExd IIC T5/T6

UL listing No. E187894.

– Ordinary locations: Visual Signal Device

UL listing No. S8128

CENELEC/ATEX approved.

CENELEC EN50014 & EN50018

ATEX Cert. No. Baseefa 04ATEX0009X.

Material:

Body: Glass reinforced polyester.

Lens: Glass.

Backstrap: stainless steel 316.

Wire Guard (optional): Stainless steel wire.

Cast Guard (optional): Aluminium LM25M.

Finish:

Natural black or epoxy painted to customer specification.

Voltage:

24, 48V DC

110, 120, 230, 240, 254V AC

Tube Energy:

15 joules.

Tube Life:

>1 x 10⁶ flashes.

Flash Rate:

60, 80, 120 fpm.

Certified

-67°F to +131°F (-55°C to +55°C) T6.

Temperature:

-67°F to +158°F (-55°C to +70°C) T5.

Weight:

Pipe mount: 5¼lb/2.6kg; Direct mount: 6½lb/3.0kg.

Ingress Protection:

NEMA 4X & 6, IP66 & IP67.

Entries:

Supplied as 2 x ¾" NPT (direct mount) or ¾" (pipe mount) as standard.

Other options available:

Up to 3 x ½" NPT or 3 x ¾" NPT (direct mount);

½" NPT (pipe mount) — contact sales office to order.

Terminals:

Direct mount: 12 x 14AWG.

Pipe mount: 8 x 14AWG.

Relay Initiate:

Available on all units — suitable for 24V DC supplies only.

Labels:

Tag/Duty label option.

The Hazard•Gard Series is our new line of visual and audible signaling and communication products for industrial use. The Hazard•Gard Series of visual signals is available in Division 1, Zone 1 and Division 2, Zone 2 applications. This new visual product offering provides three methods of light generation for visual indication: Xenon strobe, rotating beacon and steady-on indicators. All models come in red, amber, green, blue, clear and magenta, and AC and DC voltage.

The Hazard•Gard Division 1, Zone 1 EX Series is a compact, rugged cast aluminum visual signaling device for use in explosionproof and corrosive applications. The Hazard•Gard delivers six color choices and a complete range of operating voltages for AC and DC circuits. The Hazard•Gard UL approved fire alarm strobe delivers the industry required 16–33VDC voltage for light output for Fire Alarm circuits. With powerful light output, compact design and Crouse-Hinds explosionproof integrity, the Hazard•Gard is applicable for safety, indication, evacuation, and security uses. All are marine rated and offer four mounting methods—pendant, ceiling, wall and stanchion.

Types of visual signals that are available:

1. **Rotating lights**—our line uses halogen lights for brightness in areas that have high ambient light levels or when the light must be seen from a long distance.
2. **Steady-on or flashing lights** using a halogen incandescent lamp or LED. Used as a continuous source to warn, communicate or draw attention to an area, machine or process.
3. **Strobe lights** use a strobe light (for more on strobe technology, see section “Strobe, Principle of Operation” below) for signaling or warning of various conditions. A strobe emits a powerful blast of bright light.

**PRODUCT OVERVIEW—HAZARD•GARD EXPLOSIONPROOF VISUAL INDICATION:**

Description	Catalog Reference	Operating Voltage	Operating Circuit
Fire Alarm Strobe	EXFASC301	16–33V DC	Fire alarm circuits and other applications requiring electrical supervision of signaling.
Strobe Light	EXS301	120VAC or 12–48V DC	Standard electrical circuits 12–48V DC either AC or DC operation.
Strobe Light Diode Polarized	EXDS301	24V DC	Standard electrical circuits or auxiliary fire or warning circuits requiring electrical supervision.
Strobe Light Non-Marine, Fused	EXSNM301	12–48V DC	Fused for use on standard electrical DC circuits.
Rotating Beacon	EXR301	120V AC	Standard electrical circuits, AC operation.
Rotating Beacon Diode Polarized	EXDR301	24–28V DC	Standard electrical circuits or auxiliary fire or warning circuits requiring electrical supervision.
Steady-On Beacon	EXSO301	120VAC or 24–28V DC	Standard electrical circuits either AC or DC operation.

All Hazard•Gard Series explosionproof visual signals are marine rated (except the EXSNM), NEMA 4X and offer 6 color choices of lens: Amber, Blue, Clear, Green, Magenta & Red.

For Class I areas, consider the following:

- Utility gas plants
- Petroleum refining production and dispensing locations
- Cleaning facilities
- Dip tanks containing combustibles or flammable liquids
- Plant facilities extracting solvents
- Inhalation anesthetics areas

For Class II areas, consider the following:

- Flour mills
- Feed mills
- Grain elevators and grain handling facilities
- Aluminum manufacturing and storage areas
- Magnesium manufacturing and storage areas
- Coal preparation and handling facilities
- Starch manufacturing and storage areas
- Confectionery plants
- Pulverized sugar and cocoa manufacturing and storage plants

For Class III areas, consider the following:

- Textile mills
- Woodworking plants & furniture manufacturers
- Cotton gins
- Cotton seed milling plants
- Flax plants
- Carpet manufacturers

STANDARD MATERIALS AND FINISHES:

Class I, Division 1, Zone 1 Visual Signaling Devices

- Bodies, mounting modules and guards are die cast copper free aluminum
- Globe is heat and impact resistant glass
- Gaskets—silicone
- Internal components are solid-state electronics in a moisture-resistant and heat-dissipating epoxy

The **Hazard•Gard™ EXFASC Series** is a visual fire alarm signaling device for hazardous areas. The EXFASC Series strobes are UL 1971 Listed for indoor signaling applications for the hearing impaired in non-sleeping areas. They are also UL Listed for Type 3R, 4X installations. The strobes are available for pendant, wall and ceiling mounts.

The **EXFASC Series Fire Alarm Explosionproof Strobe** contains a supervisory diode for use in fire alarm applications. Under normal operation the diode is reversed biased, meaning it blocks voltage from being applied to the strobe light and prevents it from lighting. When a fire-initiating device such as a smoke alarm is activated, the diode's polarity is reversed through a fire alarm panel. The diode becomes forward biased, allowing voltage to the device and activating the strobe.

Primary Applications

- Visual fire alarm signaling device for hazardous areas

Typical Industries

- Energy exploration
- Utilities
- Wastewater treatment plants
- Pulp & paper plants
- Petrochemical plants
- Petroleum refineries
- Oil rigs

Key Features & Benefits

- Meets NFPA requirements for fire safety warning devices
- State of the art electronic design (full wave rectified design)
 - Low current draw is efficient
 - 24V DC regulated full wave rectified
 - Limited in-rush current favorable to other fire alarm system components
 - Proven, reliable circuitry designed specifically for use with fire alarm control panels
- Available in pendant, wall and ceiling mount
- Strobe light produces 65 flashes per minute
- Factory sealed—no external seals required
- Quick connect—Strobe fixture threads onto mounting module for easy installation
- Small compact size—ceiling mount is 13 ¾-inch long

Certifications & Compliances

- Class I, Division 1, Groups C & D
- Class I, Zones 1 & 2, Group IIB
- Class II, Division 1, Groups E, F & G

The **Hazard-Gard EXS and EXDS Series Explosionproof Strobe Lights** are designed for installation indoors and outdoors in locations which are hazardous due to the presence of flammable vapors or gases, ignitable dusts or ignitable fibers and flyings. The units are UL Listed for Type 3R and 4X installations. The 120V and 24V DC models are **Marine Rated**. The strobes are available for pendant, wall, stanchion and ceiling mounts, and come in six different globe colors.

The **EXDS Series** is diode polarized for use in electrically supervised circuits. Electrically supervised circuits are typically used in life-safety or security applications.

Under normal operation the diode is reversed biased, meaning it blocks voltage from being applied to the strobe and prevents it from lighting. When an initiating device such as a smoke detector is activated, the diode's polarity is reversed through a circuit panel. The diode becomes forward biased, allowing voltage to the device and activating the strobe.

Primary Applications

- Condition signaling
- Equipment obstruction warning
- Security alert
- Emergency evacuation signaling
- In areas where audible signals cannot be heard

Typical Industries

- Utility gas plants
- Petroleum refineries
- Wastewater treatment plants
- Chemical & petrochemical
- Mining
- Pulp & paper

Key Features & Benefits

- Strong strobe signal that produces 65 flashes per minute.
- Compact design will not obstruct in low ceiling or small areas, ceiling mount is only 13¾-inch long
- Quick connect—Strobe fixture threads onto mounting module for easy installation
- Factory sealed—No external seals required
- Available in pendant, wall, stanchion and ceiling mount

The **Hazard•Gard EXR Series Explosionproof Rotating Beacons** are designed for installation in hazardous locations, such as manufacturing plants, heavy industrial facilities, refineries, chemical, petrochemical, pharmaceutical and off-shore drilling platforms.

The units are UL Listed for Type 3R, 4X and marine installations. The rotating beacons are available for pendant, wall, stanchion and ceiling mounts, and come in six different globe colors.

The **EXDR Series Explosionproof Rotating Beacon** is diode polarized for use in standard 24–28V DC electrical circuits or in electrically supervised circuits. Electrically supervised circuits are typically used in life-safety or security applications.

Under normal operation in an electrically supervised circuit, the diode is reversed biased, meaning it blocks voltage from being applied to the rotating beacon and prevents it from lighting. When a warning detecting device is activated, the diode's polarity is reversed through a circuit panel. The diode becomes forward biased, allows voltage to the device and activates the rotating beacon.

Primary Applications

- Security alert
- Equipment obstruction warning
- Obstacle warning
- Status indication of a process
- Areas under construction
- Supplement audible signaling or off limits

Typical Industries

- Utility gas plants
- Pharmaceutical plants
- Wastewater treatment plants
- Refineries
- Chemical plants
- Mining

Key Features & Benefits

- Powerful halogen rotating beacon emits bright light to provide critical visual warning
- Available in pendant, wall, stanchion and ceiling mount
- Available in six different globe colors—amber, blue, clear, green, magenta and red
- Beacon produces 75 rotations per minute
- Factory sealed—No external seals required
- Quick connect—Strobe fixture threads onto mounting module for easy installation

Certifications & Compliances

- Class I, Division 1, Groups C & D
- Class II, Division 1, Groups E, F & G
- Class I, Zones 1 & 2, Group IIB
- Class III
- UL and cUL 1638, UL 1203 and UL 844 Listed
- 1598A Marine Listed
- NEMA 4X watertight, IP 66

Materials & Finishes

- Body, mounting modules and guard—Copper-free aluminum
- Globe—Heat and impact-resistant glass
- Gaskets—Silicone
- External hardware—Stainless steel
- Internal components—Solid-state electronics in a moisture-resistant and heat-dissipating epoxy
- Epoxy powder coated for corrosion resistance

Ratings

- 120V AC (EXR) and 24–28V DC (EXDR)
- Operating Current: 0.382 amps at 120V AC
0.8 amps at 24–28V DC
- Peak Candlepower: 3328 (EXR)
2838 (EXDR)

Hub Size

- ¾-inch NPT pendant, ceiling and wall mount
- 1¼-inch NPT stanchion mount

The steady-on beacons are available for pendant, wall, stanchion and ceiling mounts, and come in a variety of globe colors. Typical industrial and commercial applications include food processing plants, refineries, mines, tankers, laboratories, sewage treatment plants, off-shore oil rigs, water and filtration plants and chemical plants. The diode polarized steady-on beacon is used in electrically supervised circuitry for life-safety or security applications.

Primary Applications

- Safety lighting
- Continuous source to communicate
- Obstacle warning
- Exit or entrance lights
- For identifying the location of safety equipment such as showers or emergency telephones

Typical Industries

- Chemical plants
- Storage handling
- Dust conveyor systems
- Energy exploration
- Textile mills
- Flour and feed mills

Steady-on Beacons are designed for harsh & hazardous locations where a visual signal is required for tough environmental conditions involving corrosives, water, dust and extreme temperature.

- Broad range of light source options such as halogen, incandescent, compact & fluorescent for both indication and illumination
- Products designed for both conduit wiring and/or cable connection. NPT or metric entries meeting all installation needs

Specification—FB11 and FB12 Units

Models:	FB11 & FB12—Incandescent.
Certification:	UL Listed for USA and Canada. – Class I, Div 2, Groups C & D. – Class I, Zone 1, AExd IIB T4/T5. UL listing No. E187894. ATEX approved: CENELEC EN50014 and EN50018. FB11: Cert. No. 99 ATEX 2195X. FB12: Cert. No. 99 ATEX 2196.
Voltage:	FB11: 24, 48V DC 110, 220, 240, 250V AC FB12: 120V AC
Incandescent:	FB11: 10W incandescent fitted as standard. FB12: 60W or 100W incandescent fitted as standard.
Material:	Body: Glass reinforced polyester. Lens: Glass. Cover screws + backstrap: stainless steel 316.

Finish:	Natural black or painted to customer specification.
Ingress Protection:	NEMA 4X & 6, IP66 & IP67.
Terminals:	FB11: 6 x 14 AWG. FB12: 6 x 10 AWG.
Labels:	Duty/Tag Label optional.
Entries:	2 x 1/2" NPT.

The units are UL Listed for Type 3R, 4X and marine installations. The steady-on beacons are available for pendant, wall, stanchion and ceiling mounts, and come in six different globe colors.

Typical industrial and commercial applications include food processing plants, refineries, mines, tankers, laboratories, sewage treatment plants, off-shore oil rigs, water and filtration plants and chemical plants.

The diode polarized steady-on beacon is used in electrically supervised circuitry for life-safety or security applications.

Key Features & Benefits

- Powerful halogen light source for clear visual indication
- Available in six different globe colors—amber, blue, clear, green, magenta and red
- Factory sealed—no external seals required
- Quick connect—Steady-on beacon fixture threads onto mounting module for easy installation
- Small compact size—ceiling mount is 13¾-inch long
- Available in pendant, wall, stanchion and ceiling mount

Steady-on Beacons are designed for harsh & hazardous locations where a visual signal is required for tough environmental conditions involving corrosives, water, dust and extreme temperature.

- Broad range of light source options such as halogen, incandescent, compact & fluorescent for both indication and illumination
- Products designed for both conduit wiring and/or cable connection. NPT or metric entries meeting all installation needs
- Six light color options: Amber, Red, Green, Clear, Blue and Magenta for all signaling conditions

Certifications & Compliances

- Class I, Division 1, Groups C & D
- Class I, Zones 1 & 2, Group IIB
- Class II, Division 1, Groups E, F & G
- Class III
- UL and cUL 1638, UL 1203 and UL 844 Listed
- 1598A Marine Listed (120V AC and 24V DC only)
- cUL Listed C22.2 No. 205
- NEMA 4X watertight, IP 66

Materials & Finishes

- Body, mounting modules and guard—Copper-free aluminum
- Globe—Heat and impact-resistant glass
- Gaskets—Silicone
- External hardware—Stainless steel
- Internal components—Solid-state electronics in a moisture-resistant and heat-dissipating epoxy
- Epoxy powder coated for corrosion resistance

Ratings

- 120V AC and 24–28V DC
- Operating Current: 0.35 amps at 120V AC (EXSO)
0.8 amps at 24–28V DC (EXDSO, diode polarized)
- Peak Candlepower: 3328

Hub Size

- ¾-inch NPT pendant, ceiling and wall mount
- 1¼-inch NPT stanchion mount

Horn/Strobe Combination Unit

This range of light weight all GRP, explosionproof horns intended for use in potentially explosive atmospheres has been designed with high ingress protection to cope with the harsh environmental conditions found offshore and onshore in the oil, gas and petrochemical industries. The flamepaths, flare and the body, are manufactured completely from a UV stable glass reinforced polyester. Stainless steel screws and sinter are incorporated thus ensuring a corrosion free product. A tapered flamepath is used to overcome the problems of assembly of parallel spigot flamepaths.

Truly a unique product offering with integral visual and audible signaling devices pre-wired for simultaneous output activation.

- Suitable for Class I, Division 2 applications
- Strobe light and audible tone generator in one package
- Mounts with ease and facilitates quick field wiring
- UL, cUL, Ex and ATEX for worldwide acceptance

Certifications & Compliances

- UL Listed for USA and Canada
 - Hazardous locations:
 - Class I, Div. 2, Groups A, B, C & D
 - Class I, Zones 1 & 2, AExd IIC T4
 - Ordinary locations: Audible-Signal device
- ATEX approved
- NEMA 4X & 6, IP66 & 67
- Certified temperature -67°F to +158°F
-55°C to +70°C

Key Features & Benefits

- All GRP corrosion free
- Up to 108dBA output at 10 feet
- Integral volume control
- 27 tones, user selectable
- Horn/Strobe Combination Unit available

DB16

Loudspeakers and tone generators provide high decibel communication for messaging, alert and evacuation in harsh and hazardous locations.

- Metallic and non-metallic housings
- Explosionproof and Class I, Division 2 horns and speakers
- Mounting brackets that allow a full 180° swivel
- Products designed for both conduit wiring and/or cable connection (NPT or metric entries available)
- Selectable tones

This range of loudspeakers, intended for use in potentially explosive gas and dust atmospheres, has a power rating of up to 30 Watts and is suitable for use in the harsh environmental conditions found offshore and onshore in the oil, gas and petrochemical industries. The flamepaths, flare and body, are manufactured from a UV stable glass reinforced polyester. Stainless steel screws and mounting stirrup are incorporated to ensure a corrosion-free product.

Primary Applications

- Plant-wide alarm notification
- Audible process alarms

Specification—DB1 Unit

Certification: UL Listed for Class I, Div. 1. Groups C & D and Class I, Zone 1.
UL Listing No. E187688.
ATEX Approved: EExd, IIB T3.
Cert. No. Baseefa 02ATEX0207 for DB1(P).
Cert. No. Baseefa 02ATEX0209 for DB1H(P).

Material: LM25 corrosion resistant alloy with stainless steel cover screws.
ABS flare.

Finish: Epoxy paint finish as standard or to customer's specification.

Max Sound Levels: DB1P=93±3dB(A) (86±3dB(A) for 12V DB1).
DB1HP=100 ± 3dB(A) @ 10 feet.
Note: Sound level is dependent upon the tone selection.

Weight: DB1P 7.7lb/3.5kg approx. DB1HP. 12.3lb/5.6kg approx.

The Flex-Tone **ETH & ETHD** are heavy-duty, explosionproof tone-selectable signaling devices. Both are designed for Class I, Division 1, Groups B, C & D areas and are ideal for signaling warning or emergency conditions within process or manufacturing facilities.

The **Flex-Tone ETH tone-selectable signalers (ETH655 & ETH855)** are for use on standard electrical circuits and accept up to two contact closures providing two audible output signals selected from 55 tone choices. The ETHD855 tone-selectable signaler is used for applications (e.g., mining, tankers, laboratories) requiring electrical supervision of circuits.

The **Flex-Tone ETH remote speaker amplifier (ETH645 & ETH845)** is a speaker/amplifier for remote mounting and designed for use with the Flex-Tone (ETH640 & ETH840) Panel Control Signal Generator. The Control Panel Generator is mounted in a Division 2 area while the Flex-Tone ETH remote speaker amplifiers are remotely mounted in Division 1 areas. The ETH remote speaker amplifier (ETH645 & ETH845) operates from local available power sources. Because the Flex-Tone ETH remote speaker amplifier is available in multiple AC and DC voltages, your customer can mix and match speakers throughout their facility using available line power.

The **Flex-Tone Panel Control Signal Generator (ETH640 & ETH840)** controls a synchronous signaling sound to all ETH remote speaker amplifiers. It is ideal for applications where simultaneous signaling of a high decibel signal is needed. The Flex-Tone Panel Control Signal Generator generates 27 sounds. Four tones may be activated from field-wired, normally open contacts, or a 24V DC or 120V AC external voltage source such as an output of a PLC.

APPLICATION — FLEX-TONE EXPLOSIONPROOF AUDIBLE SIGNALS ARE USED

Industries

- Offshore platforms and drilling rigs
- Refineries, chemical and petrochemical plants
- Pharmaceutical plants
- Food and Beverage plants
- Waste water and sewage treatment plants
- Pulp and paper mills

Uses

- Communication
- Security alert
- Safety signaling in industrial and process facilities
- Emergency evacuation signaling
- Messaging

**Explosionproof
Electronic Signal
Stand-Alone Unit**

Primary Applications

- For use where a high-decibel sound is required for alert or evacuation in hazardous locations

Key Features & Benefits

- Heavy duty zinc cast construction.
- 55 tone capacity—No additional tone modules needed
- Internal volume control with internal potentiometer.
- Corrosion-resistant heat-flowed epoxy finish
- Supplied with factory sealed ½-inch threaded fitting for quick installation
- Speaker can swivel 180° vertically or horizontally depending on orientation of mounting bracket
- Mounts onto any surface using only three bolts
- 30-inch numbered wire leads

Cooper Crouse-Hinds **Flex-Tone Series Electronic Signals** are explosionproof, heavy-duty, tone-selectable signaling devices capable of producing volume-controlled, high-decibel tones. Certified for use in Class I, Division 1, Group B, C & D applications, the Flex-Tone Series is ideal for signaling warning or emergency conditions.

The **Flex-Tone ETH855** accepts up to two contact closures and delivers two audible output signals selected from 55 available tones. The two tones are selected by setting miniature switches within the unit. One of the tones can be assigned a priority status to override the other tone.

The **Flex-Tone ETHD855** is diode polarized for applications requiring electrical supervision of signaling circuit field wiring. The signal delivers one audible output signal selected from the 55 tones available.

Primary Applications

- For use where simultaneous signaling of a high-decibel sound is required for alert or evacuation in hazardous locations.

Key Features & Benefits

- Heavy duty zinc cast construction.
- Individual volume control.
- Corrosion-resistant heat-flowed epoxy finish.
- Supplied with factory sealed 1/2-inch threaded fitting for quick installation.
- Speaker can swivel 180° vertically or horizontally depending on orientation of mounting bracket.
- Mounts onto any surface using only three bolts.
- 30-inch numbered wire leads.

Cooper Crouse-Hinds **Flex-Tone Series Explosionproof Remote Speaker/Amplifier** is designed for remote mounting in Division 1 areas where simultaneous high-decibel signaling is required.

Used in connection with the Panel Control Signal Generator, the **Flex-Tone ETH845** operates directly from local power sources, allowing remote speaker/amplifiers of different voltages to be connected within the same system. Available in both AC and DC voltages, the Flex-Tone 3 can be mixed and matched throughout an application using the available line power.

ETH845 Series Remote Speaker/Amplifiers must be used with Cooper Crouse-Hinds Flex-Tone Panel Control Signal Generator on the following page.

ETH845 Series Remote Speaker/Amplifiers **accept a 10V AC audio signal** from Flex-Tone Panel Control Signal Generator.

Cooper Crouse-Hind/MEDC **Flex-Tone Series Panel Control Signal Generator** controls and initiates a synchronous signaling sound from all Flex-Tone 3 remote Speaker/Amps installed in a system. The Panel Control Signal Generator is mounted in a Division 2 area, while controlling the Flex-Tone 3 Speaker/Amps that are remotely mounted in Division 1 areas.

The Panel Control Signal Generator produces 27 sounds. Four tones may be activated from field-wired, normally open contacts, or a 24V DC or 120V AC external voltage source such as an output from a PLC.

Primary Applications

- Hazardous area applications calling for high-decibel output with simultaneous signal delivery over all speakers installed in a system
- Emergency warning systems, plant evacuation alarms, security intrusion alarms, process monitoring, shift start and dismissal horns, and paging signals

Key Features & Benefits

- 27 tone capability—No additional tone modules needed
- Centralized programmable tone selection
- PLC compatible
- System-wide priority tone
- 24V DC battery backup terminals
- Short circuit protected

Certifications and Compliances

- Class I, Division 2, Groups A, B, C & D
- Class II, Division 2, Groups F & G
- Class III
- UL 464 and 1604 Listed
- cUL C22.2 No. 205
- CE Marked—Cenelec LV & EMC Directives
- NEMA 3R, IP 44

Materials & Finishes

- Zinc-cast construction with an epoxy powder coat finish

DIMENSIONS—FLEX-TONE SERIES AUDIBLE SIGNALING DEVICES

EExd version (optional guard)

EExia/EEExm/UL versions (optional guard)

The MEDC heat detector has been designed for use in hazardous environments. These units are suitable for fire alarm and/or suppression systems in offshore and onshore applications including paint spray booths, flammable material stores, turbine rooms, extract ductwork and other hazardous areas throughout the oil & gas, petrochemical and process industries.

Comprising a Fenwal rate-compensated detector with all-stainless steel external construction, mounted to either a type SM87 marine grade alloy enclosure (EExd version) or JB10 corrosion-free GRP enclosure (EExia, EEExm/UL versions). The contact in the detector CLOSES at alarm temperature.

To select appropriate temperature setting see specification on reverse.

Primary Applications

- Compressor turbine/generator skids
- Switchgear or motor control status rooms
- Process tank areas or transmission lines

Typical Industries

- Power generation
- Nuclear plants
- Chemical processing
- Upstream/downstream oil & gas

Diode Polarized Technology: Also known as supervisory diode circuit for use in fire alarm applications or other critical warning requirements such as industrial hazards and process control emergency indication. Units with a supervisory diode typically have four wires.

In fire alarm technology, when a fire-initiating device such as a smoke alarm is activated, circuit resistance on the initiating circuit goes to zero. The fire alarm panel goes into alarm mode when it senses the resistance at zero. See diagram below.

With the fire alarm panel in alarm mode, voltage polarity is reversed (under normal operation the diode is reversed biased blocking voltage) on the circuit powering the notification device or strobe light. The strobe light is activated (diode is now forward biased allowing voltage through) when it senses a change in polarity. All NFPA approval visual indication for fire alarm must use a clear lens.

Terms used in fire alarm circuits

Initiating Device Circuits (IDC) connect the fire alarm panel to the system components that detect the fire. System components such as smoke detectors, manual pull stations, and water flow switches.

Appliance Circuits connect the fire alarm panel to the signaling devices such as strobe lights, bells, horns and speakers that alert building occupants of a fire.

PROTECTIVE SIGNALING SYSTEM WIRING PRACTICES

INTRODUCTION

The installation of fire alarm system wiring is similar in many respects to any other low-voltage system wiring. Because the nature of the system affects life and property, additional measures are required during installation to ensure the system is operational at all times. The most sophisticated of control panels will not operate properly if the field wiring is installed incorrectly. It is the goal of this section to explain why correctly installed field wiring is vital in the operation of a fire alarm system, and how to recognize proper and improper installations. The process requires four basic steps: **SELECT** the proper cable for the application; **INSTALL** the cable properly; **TEST** the cable to make sure it is free of shorts, opens, and ground faults; and **TERMINATE** the cable properly.

BASIC CIRCUIT SUPERVISION

There are two types of circuit supervision widely used in fire alarm systems today. Direct Current (DC) continuity supervision is used extensively on small systems. Large fire alarm systems use sophisticated electronic multiplex circuitry and “electronic questions and answers” to supervise field wiring and devices.

Figure 1 shows a simplified fire alarm panel supervising a single Initiating Device Circuit or zone using Direct Current (DC) continuity supervision. The supervisory current from the battery flows through terminal #1, the field wiring, the EOL resistor, terminal #2 of the control panel through a second resistor, and returns to the battery. The internal resistor and EOL resistor have equal resistance values. The voltage at the zone test point V_z is measured by voltage sensing circuits. As long as the supervisory current flows through the EOL resistor, the voltage at V_z is one half the supply voltage V_s and the voltage sense circuitry generates a normal panel response.

Figure 2 shows when a smoke detector or pull station operates, it effectively puts a **short** across terminals #1 and #2. This brings the zone test point voltage V_z up to the supply voltage V_s . When the voltage sense circuitry sees $V_z = V_s$, it generates an alarm response, such as ringing a bell.

Figure 1

Figure 2

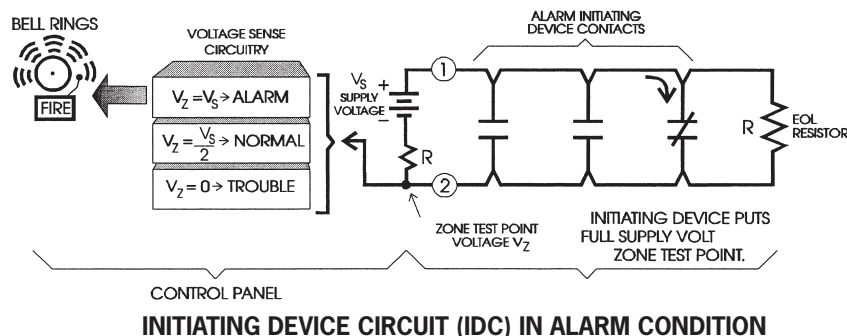

Figure 3 shows should the field wiring **open**, the supervisory current no longer flows through the field wiring and EOL resistor and V_z goes to zero. When the voltage sense circuitry sees $V_z = 0$, it generates a trouble response, such as sounding the trouble buzzer.

Figure 4 shows an improperly wired Initiating Device Circuit. Because the supervisory current is not forced to flow through the top and bottom branches, the break in the top branch doesn't interrupt the supervisory current, and there is no indication of the trouble. Should the top device detect a fire, the signal would never reach the control panel. Note that the lower device would send a fire alarm signal but would not send a trouble signal to the fire alarm panel, a classic symptom of miswiring.

Large multiplex systems use sophisticated electronics that employ a system of "electronic questions and answers" to verify circuit viability. The control panel knows the "names" of all the devices that should be connected to it. After asking a "question" of each name or device on its list, the control panel must receive an answer from that device only. Failure to receive the proper answer causes the panel to generate a trouble signal. Because multiplex systems do not depend on the wiring path for supervision, some multiplex systems permit limited branch wiring or T-taps.

Figure 3

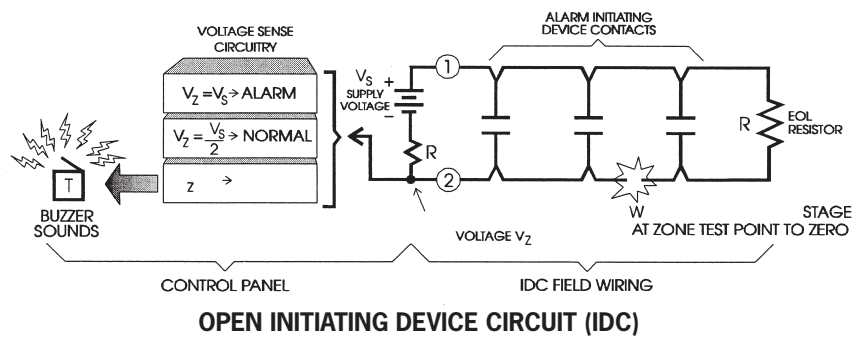

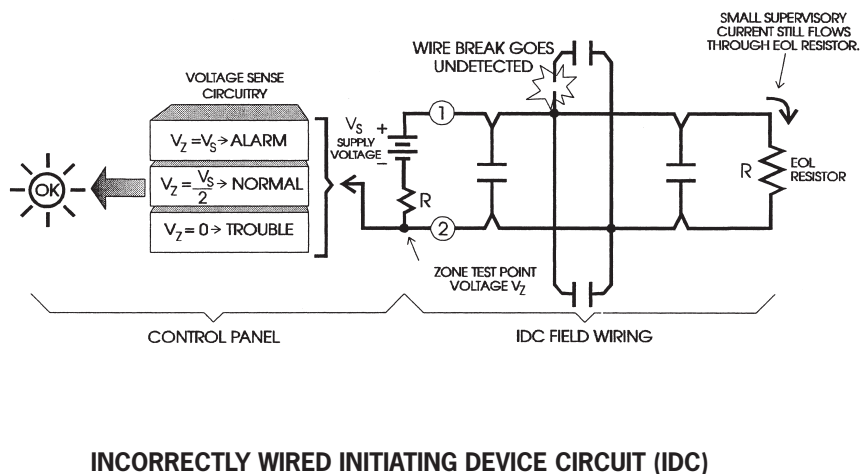

Figure 4

When using decibels, to double the loudness you only have to add 3 dB. For example, if a signal is rated at 85 dB at 10 feet, then a signal twice as powerful would be rated at 88 dB at 10 feet. The table below illustrates how the sound pressure level changes with distance under good conditions.

SOURCE IN dB	FEET FROM SOURCE
100 dB	10
94 dB	20
90 dB	30
88 dB	40
82 dB	80

THINGS TO CONSIDER WHEN SPECIFYING AUDIBLE SIGNALS.

1. Define the function of the signal: For example, general alarm, emergency, shift dismissal, paging, and process indication.
2. Uniform sound distribution: A larger number of smaller devices evenly distributed throughout the signaling area are better than a single large/loud device.
3. Ambient Sound: The signal should exceed the surrounding ambient noise by 6 decibels.
4. Size of the area: Common sense applies here, the larger the area, the louder the signal required and/or the greater the number of signaling devices required.
5. Mounting: As with all our products, consider mounting constraints and choose a suitable device and mount. Horns and speakers perform best when rigidly mounted to the structure.

Candela Seconds: Actual light energy contained in a pulse of light. Used to specify the minimum requirements for light output from a flashing light. Candela seconds is a relative measure of how bright a flash of light will appear to a human eye. (Candela: The intensity base unit for light.) Candela seconds and candela effective (below) are the primary metrics by which to compare flashing warning lights.

Candela Effective or Effective Candlepower: Equates the brightness of a flashing light source to the brightness of a steady burning source. If a flashing light has a candela effective rating of 100 then it will be visible at the same distance as a 100 candela steady burning source. Candela effective is used in specifying intensities of flashing light sources because it compares flashing warning lights with steady burning light sources.

Peak Candela or Peak Candlepower: The maximum light intensity generated by a flashing light during its light pulse.

Strobe, Principle of Operation: A strobe light consists of a xenon strobe lamp, power supply, energy storage capacitor and a trigger circuit.

The strobe bulb consists of a glass tube that has an electrode at either end called an anode (+) and cathode (-). The tube is filled with xenon gas and a trigger element is applied to the outside of the bulb. The trigger element could be a wire wrapped around the tube, a conductive paint stripe along one side of the glass bulb or clear conductive coating over the outside of the tube.

The power supply charges a large capacitor with the voltage needed to “strike” the bulb and is applied to the anode and cathode. The voltage is generally between 200 and 500 VDC depending on the design of the light.

The trigger circuit applies 7,000 to 10,000 volts (low current) to the trigger element of the bulb causing the xenon gas to ionize and discharge the capacitor.

The energy excites the xenon gas and produces a very short burst of high intensity white light.

Watts (Power): joules x flash rate

$$\text{Joules} = \frac{\text{Watts}}{\text{Flash Rate}}$$

$$\text{Joules} = (\text{Capacitance in Microfareds}) \left(\frac{\text{lamp voltage}^2}{1000} \right)$$

2

Things that impact light output:

- Physical shape of the strobe lamp and arrangement within lens
- Efficiency of the strobe lamp—its ability to turn electricity into a bright white light
- Color of the lens
- Size and efficiency of the lens
